

CHEONG XIN CHEN

+60 13-797 1999 | cxc_1008@hotmail.com
Cyberjaya, Selangor, Malaysia

PROFESSIONAL SUMMARY

Bachelor of Computer Science (Software Engineering) undergraduate with hands-on experience in web development and IT technical support gained through an industrial internship. Currently building a full-stack low-code platform as a Final Year Project. Comfortable working across the stack with React, Next.js, PHP and PostgreSQL, with practical exposure to hardware/network troubleshooting and client-facing IT support. Trilingual in English, Malay and Mandarin.

EDUCATION

Multimedia University (MMU), Cyberjaya

Expected Graduation: June 2027

Bachelor of Computer Science (Hons.) – Software Engineering

Multimedia University (MMU), Cyberjaya

2022 – 2024

Diploma in Information Technology

PROJECTS

Final Year Project: Low-Code Web Platform for Business Forms & Approval Workflows

In Progress

- Designing and building a full-stack low-code platform that lets small businesses visually create business forms and configurable approval workflows without writing code, across Admin, Employee, and Approver portals.
- Building the front end with Next.js (React) and Tailwind CSS, and the backend with Next.js API routes and Prisma ORM on a PostgreSQL database.
- Architected a JSON schema-driven form builder that serializes drag-and-drop form layouts into versioned schemas, dynamically rendered as React components at runtime.
- Designed the approval workflow engine supporting approval groups, individual approvers, conditional routing, rejection reasons, and a full audit trail.
- Produced the system design (architecture, ERD, class, use case, and sequence diagrams) and a working prototype covering form publishing, request submission, and approval decisions.

INTERNSHIP EXPERIENCE

Industrial Trainee – IT Systems & Support

Chipsoft (M) Sdn. Bhd. | Jul – Oct 2024

- Configured and customized AutoCount business software for multiple clients, including building custom invoice templates, a POS product interface, and barcode label designs.
- Migrated and validated client business data (customer records, inventory, transactions) into AutoCount, ensuring data accuracy across systems.
- Provided remote technical support via AnyDesk, troubleshooting software issues and deploying antivirus updates across 15+ client machines.
- Planned and produced digital content for the company's Facebook page, redesigning layouts and visuals with Canva to improve engagement.
- Assisted with general IT infrastructure tasks, including server room checks and workstation setup, as part of a small technical support team.

TECHNICAL SKILLS

- Languages & Frameworks: HTML, CSS, JavaScript, PHP, Python, React, Next.js, Tailwind CSS
- Databases & ORM: PostgreSQL, Prisma ORM
- Tools & Systems: Git, AutoCount, AnyDesk, Windows Server, basic networking & hardware troubleshooting
- Other: Canva (content design), Microsoft Office Suite
- AI-Assisted Development: Cursor, GitHub Copilot, ChatGPT, Gemini, Claude
